

# About WarsawJS

## Short Description

WarsawJS is a local community of JavaScript professionals and enthusiasts. We meet every month to talk and debate about our favorite programming language. This community is focused on sharing experience from different fields on which JS is used, from web browsers, to servers, dev tools, mobiles, smart tvs, micro controllers, databases, video games and so on.

## Long description

We have successfully arranged the following events:

- 64 meetups
- 39 workshops
- 1 hackaton — <https://edukaton.com>
- 1 conference — <https://confrontjs.com/>

All these events were organised by our independent community. We are growing organically since 2014.

Our events are open, which means they're also accessible. We offer live streaming of each WarsawJS Meetup and each talk can be later seen as separate YouTube video.

Our WarsawJS Meetups are totally free to enter, no tickets are required, no formal barriers. We see each other regularly each second Wednesday of every month.

Our Workshops are affordable. Thanks to our sponsors we charge only 60PLN per ticket to an 8 hour course with an experienced and well prepared trainer in a group of approx. 8 participants.

Our hackaton, which had aimed to create a tool for teaching self defence against fake news to children and seniors, has successfully connected people from various professional groups: educators, programmers / designers, marketing specialists and lawyers.

The community we belong to helps JavaScript novices in joining the ecosystem, finding mentors and connecting with industry members. WarsawJS enables knowledge sharing, friendly competition and obtaining new partnerships.

Thanks to WarsawJS, ambitious developers find new projects. They learn to be greater speakers and better teachers.

Together we break the barriers and make the ideas of great minds visible and accessible.

We are aware of diversity issues in our industry and we tackle them in a gentle way. We use Berlin Code of Conduct and we base our cooperation on trust and mutual respect for everyone. Our organisers work together with Women in Tech, Rails Girls, Geek Girls Carrots.
